Art Unit: 2831

1. This application is in condition for allowance except for the following formal matters:

Specification

2. Applicant is reminded of the proper language and format for an abstract of the disclosure.

The abstract should be in narrative form and generally limited to a single paragraph on a separate sheet within the range of 50 to 150 words. It is important that the abstract not exceed 150 words in length since the space provided for the abstract on the computer tape used by the printer is limited. The form and legal phraseology often used in patent claims, such as "means" and "said," should be avoided. The abstract should describe the disclosure sufficiently to assist readers in deciding whether there is a need for consulting the full patent text for details.

The language should be clear and concise and should not repeat information given in the title. It should avoid using phrases which can be implied, such as, "The disclosure concerns," "The disclosure defined by this invention," "The disclosure describes," etc.

3. The lengthy specification has not been checked to the extent necessary to determine the presence of all possible minor errors. Applicant's cooperation is requested in correcting any errors of which applicant may become aware in the specification.

Claim Objections

4. Claim 1 is objected to because of the following informalities:

Claim 1, line 10-11, the limitation, "then a ratio of a positive electrode active material and a negative electrode active material is controlled to satisfy $0.05 \leq a/b \leq 0.3$ " is confusing.

Prosecution on the merits is closed in accordance with the practice under *Ex parte Quayle*, 25 USPQ 74, 453 O.G. 213, (Comm'r Pat. 1935).

A shortened statutory period for reply to this action is set to expire **TWO MONTHS** from the mailing date of this letter.

Allowable Subject Matter

5. The following is a statement of reasons for the indication of allowable subject matter: The prior art does not teach or suggest (in combination with the other claim limitations) an organic electrolyte capacitor wherein a ratio of a positive electrode active material and a negative electrode active material is controlled to satisfy $0.05 \leq a/b \leq 0.3$, wherein a is a cell capacity when the charged organic electrolyte capacitor is discharged to half a charging voltage over 1 +/- .25 hours, and b is a full negative electrode capacity that is a capacity when the negative Electrode in the charge state is discharged to 1.5 V (claims 1-4).

Conclusion

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

20070002523 – organic electrolyte capacitor
